BASICS OF DIGITAL MARKETING

Introduction

Digital marketing, also called online marketing, is the promotion of brands to connect with potential customers using the internet and other forms of digital communication. This includes not only email, social media, and web-based advertising, but also text and multimedia messages as a marketing channel.

Objectives of the course

To Enhance Employability of Learners

How digital marketing works?

It relies on consumer data to find a business's target audience and deliver the most relevant messaging possible. This is effective, but digital marketing is so popular that the biggest challenge today is learning how to stand out from the crowd. Your company's use of digital marketing depends on its model.

Course Outcome

In the present world, a business cannot sustain itself without an online presence. The reason is quite evident; with more and more people getting on the internet every day, not being online is the equivalent of being invisible. And in the age of information, that is not a place any business wants to be. This is where digital marketing comes in. A well-planned and executed **digital marketing campaign** can help you reach out to more people online and convert them into customers. And that is why it is so important for businesses these days.

If you're wondering what digital marketing entails or if it's right for your business, then this blog is for you. Here, I will talk about the basics of digital marketing, its importance, and how you can go about implementing it.

Overall, a well-designed digital marketing strategy can help businesses achieve their marketing goals, increase their visibility and brand awareness, generate leads and sales, and ultimately grow their business

Course Title-“Electronic Waste Management”

Preamble:

The electrical and electronic waste (e-waste) is one of the fastest growing waste streams in the world. The increasing “market penetration” in developing countries, “replacement market” in developed countries and “high obsolescence rate” make e-waste as one of the fastest growing waste streams. Environmental issues and trade associated with e-waste at local, transboundary and international level has driven many countries to introduce interventions. In accordance with the National Environmental Policy (NEP) and to address sustainable development concerns, there is a need to facilitate the recovery and/or reuse of useful materials from waste generated from a process and/or from the use of any material thereby, reducing the wastes destined for final disposal and to ensure the environmentally sound management of all materials. The NEP also encourages giving legal recognition and strengthening the informal sectors system for collection and recycling of various materials. In particular considering the high recyclable potential of e-waste such wastes should be subject to recycling in an environmentally sound manner.

Aim of the course:

- The aim is the disposal of unwanted electronic gadgets;
- Compared to the past days the e-waste products or items have increased abundantly nowadays;
- The major everyday use electronic products are computers, ACs, mobile phones, television, fax machines, etc.
- A proper methodology should be followed to control the pollution caused by e-waste products.
- Students are aware of the impacts of e-waste on the environment.

Objective of the course:

- To aware the students regarding reused or recycled of e-waste.
- To introduced in e-waste management Extended Producer Responsibility.
- To provide information for producers are given a vital responsibility for the disposal and treatment of the products.

Detailed Syllabus and Learning Outcome:

“Introduction to Nanotechnology”

Preamble:

Nanotechnology is the science of dealing with atoms with only a few nanometers in dimensions. As the size of objects is scaled down to the nanometer regime, the material properties undergo a transformation, presenting a great potential for promising applications. Nanotechnology is considered more powerful than even the industrial revolution, with applications ranging from automobiles to medicine. Nanotechnology can be broadly classified into Nanomaterials, Nano electronics and the Nano-biotechnology. The Nanotechnology revolution is expected to pave way for computers billions of times more powerful than today's, and new medical capabilities that will heal and cure in cases that are currently considered as utterly hopeless.

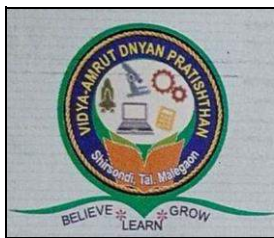

The main purpose of running this course is to impart new information to the students so that awareness should be created among the students.

Aim of the course:

- Assess the effectiveness of the newly developed curriculum using a rigorous formative and summative assessment plan.
- To educate Chemistry undergraduate students in ‘nanotechnology’ that includes use of ‘nanotechnology’ in various fields like agriculture, biomedical and biomaterials energy production, and consumer products.

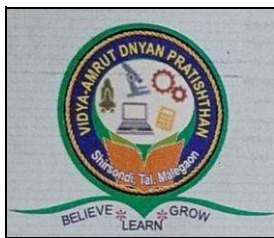

Objective of the course:

- To understand the nature and properties of nanomaterials
- To provide scientific understanding of application of nanomaterials and nanotechnology in agriculture, health and environmental conservation.

“Fundamentals of python programming”

Preamble:

Python is a Programming language, so the primary purpose of Python is Software Development. It is a general-purpose, high-level, interpreted, interactive, object-oriented, open-source programming language. Python is a general-purpose language – It is a programming language designed to be used for writing software in the widest variety of application domains. Python is a high-level language – It is a programming language designed to simplify computer programming, high-level source code contains easy-to-read syntax that is later converted into a low-level language, which can be recognized and run by a specific CPU. Python is an interpreted language – An interpreted language is a type of programming language for which most of its implementations execute instructions directly and freely, without previously compiling a program into machine-language instructions.
